

Computer Workload Hazard Control - 2

- Potential hazard controls
 - Cross train employees; allows task variety and avoids single point failure on key work
 - Distribute the workload; work as a team
 - Use keyboard shortcuts to relieve strain of repetitive mouse use
 - Check on employees frequently when workload is high, ask how they are doing, look for danger signals (easily frustrated, fatigue, uncommunicative when you ask if there is a problem)
- Request an Ergo Eval if you are experiencing recurring discomfort @ <https://ehswprod2.lbl.gov/Ergo/Login.asp>

For more information, contact the Ergo Team x5818 or ergo@lbl.gov
